

Appendix A. Text to Image Generation

Figure 1: Examples of text-to-image generation. For each text prompt on the left, the first 3 images are found using StyleGAN+CLIP and the second 3 images are generated by DALL-E.

Appendix B. Image Embedding in Latent Space

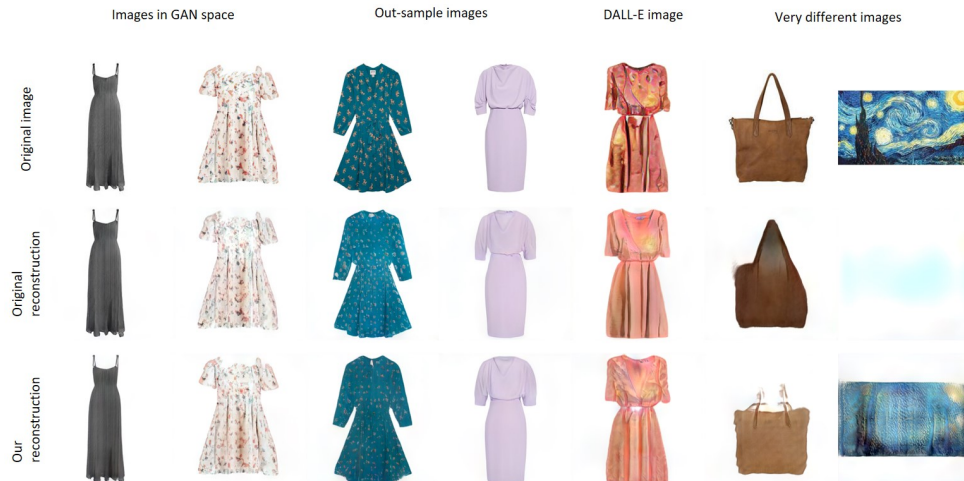

Figure 2: Example results of image embedding. The images in first row are the input images. The second row shows images found without using the pixel-level loss, and the third row shows images found using the pixel-level loss.
